

A pest that is hard to beat

The director of preservation of plants of the Semnan Agricultural Organization, declaring that the cultivated area in Semnan Province has been decreasing according to the recent plan of crop and dehydration, added: "This issue has complicated the struggle against the age of the pest as it decreases with the following level. The cultivation of wheat has reduced the pit number of the pest, and this has made it more difficult to control the pest in the fields.

According to ISNA, Abbas Moshirian at a meeting of the Chiefs of Crop Damage with Jihad in the provincial cities of the province pointed out that the age-old aphids are largely damaging to the wheat and barley crop. Age is a key pest of wheat fields in the province, which throughout the province we are involved with this and every year we are suffering damage to wheat products. Given the fact that wheat is the dominant force and the strategic product of the country, measures must be taken to counteract the age and reduce the amount of damage.

Last year, 28,000 and 445 hectares of anti-pest control were carried out in the provinces of Garmsar and Aradan, the director of plant protection of the Semnan Jihad Organization said.

He continued by saying that in recent

years a large part of the province's production was involved with the age-old pest, this year we need to have a precise plan to fight the pest, so that we can see less damage.

Director of Plant Protection of the Semnan Agricultural Organization said: "In the year 97, with the timely management and efforts of plant protection experts who, with the cooperation of farmers, fight against this pest during the holidays of Nowruz, the fields affected by pest have decreased below one percent of the total province's wheat production.

He said that this year, with the measures and plans, we witness unprecedented wheat age control in wheat and barley fields of Semnan province, continued: 95% reduction in effective age and 90% reduction in the number of affected farmers, as well as reduction of age centers shopping centers From 22 centers to 14 centers has been the result of these measures, which has led to an increase in the quality of wheat in Semnan province.

Director of preservation of plants of Semnan Agricultural Jihad Organization said that the holding of workshops, technical visits, nightlife and daily visits, as well as accurate observation and strong struggle with age pest in the success has been effective. He said: "This year, It is necessary to fight against age and farmers

who have more than 2 percent wheat have been called up and targeted training courses will be held for them.

Referring to the plans for this year's campaign against pest disease, Mosirian said: "This year, in addition to training classes, this year is an urgent measure to combat age-related pests as well as monitoring on the agenda.

Referring to recent rainfall in the province of Semnan, he said that the rainfall, in addition to the promise of a prolonged period for farmers, has concerns about weeds and also fungal diseases, so experts in the field of observation of day-to-day farming with special sensitivity of these cases To monitor and inform the farmers in their areas of coverage of the coping actions required

He said that he would have had a maximum maternal struggle with plant protection policies in the current year and said: "If the fight against maternal age is carried out thoroughly and in principle, the fight against nymphs will also be easier on the province's farms."
