

Projection of production of 950 thousand tons of wheat in the current year in East Azarbaijan

Head of Agricultural Jihad Organization of East Azarbaijan
Estimates of wheat production in the current year by 950 thousand tons

Akbar Fathi told reporters, referring to the positive effects of rainfall after several years of drought, said the early spring rainfall prevented the frost damage and compensated the farms need for water.

He stressed the necessity of using rainfall for nutrition in the agricultural sector of the province and continued: Considering the probability of an outbreak of certain diseases, actions should be taken to combat these landslides.

Referring to the livestock belonging to the rangeland, he added: "Farvardin month's rainfall has strengthened the rangeland, and given the importation of some inputs, we will not need to supply our forage from imported inputs.

The chairman of East Azarbaijan Agricultural Jihad Organization stated that in the field of grain cultivation, due to the increase in rainfall, an increase of 5 percent of oilseed production in the province was planned. He said: Considering the necessity of using "road"

fertilizer for vegetative nutrition, it has been promoted to increase the distribution of this fertilizer.

Referring to the increase in the humidity in the field of agriculture, the probability of an outbreak of yellow wheat rust increases, said the province's farms are monitoring to take action if this disease is detected.
